NOTES

^a Epidemiological Week for which information is available.

^b **Suspected case:** patient with acute onset of fever >38°C (101°F) and severe arthralgia or arthritis not explained by other medical conditions, and who resides or has visited epidemic or endemic areas within two weeks prior the onset of the symptoms. **Confirmed case:** a suspected case with any specific CHIK test (viral isolation, RT-PCR, Ig M, or four-fold increase of chikungunya specific antibodies titers) - PAHO/CDC confirmed case definition available at www.paho.org/chikungunya.

^c Incidence / 100,000 pop.

^d PAHO/WHO. Basic Indicators, 2013. http://www.paho.org/hq/index.php?option=com_docman&task=doc_download&gid=23535&Itemid=270&lang=en, except St. Barthelemy ("Populations légales 2009
